DETAILED ACTION

Location of Application

1. The location of the subject application has changed. The subject application is now located in Workgroup 1630, Art Unit 1634.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 1-8, 10-12, 14-27, 28, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deugau et al.

5. Deugau et al., disclose a method of performing amplification using « indexing linkers » and primers that have a nucleotide sequence that is complementary to the ligated indexing linker

Art Unit: 1634

(column 11). The indexing linker has a conserved sequence, e.g., a restriction site, and a region of non-conserved sequences.

6. Deugau et al., disclose in their examples the amplification of *E. coli* DNA. Such a showing is considered to meet the limitation of Claims 1, 2, 5, 6, 12, 16, 18, 19, 20, 23, and 24.

7. Deugau et al., disclose that one could use all possible permutations of the random sequence found in the indexing linker. Accordingly, it would have been obvious to an ordinary artisan to also use an equally varied set of primers such that the sequences present in the library would be amplified.

8. Deugau et al., also discloses that the indexing linker, and ergo, the primers, can have random sequences on one or both termini.

9. For the above reasons, and in the absence of convincing evidence to the contrary, the method of Deugau et al., where indexing linkers and corresponding primers are used in the manipulation and study of nucleic acids in a library is considered to render obvious the instantly claimed method of amplifying desired regions of nucleic acids.

Conclusion

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

11. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1634

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
